SITE 1101: Principles of Information Systems

Team Exercise

- Find if x and y coordinates of the vertex i of the 8-point star inside of a circle with radius R centered at the origin.

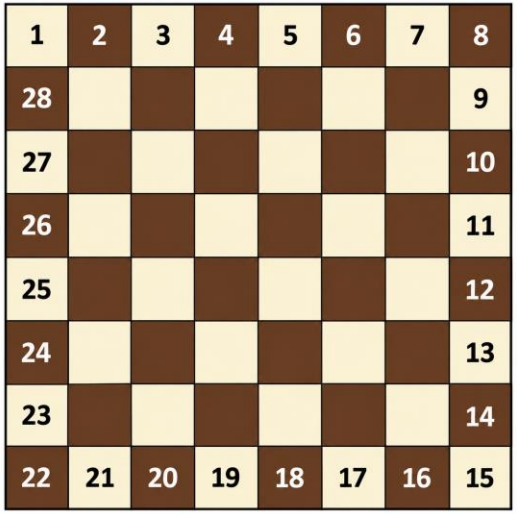

Team Exercise

- Given number N, find its row and column.

1	2	3	4	5
10	9	8	7	6
11	12	13	14	15
20	19	18	17	16

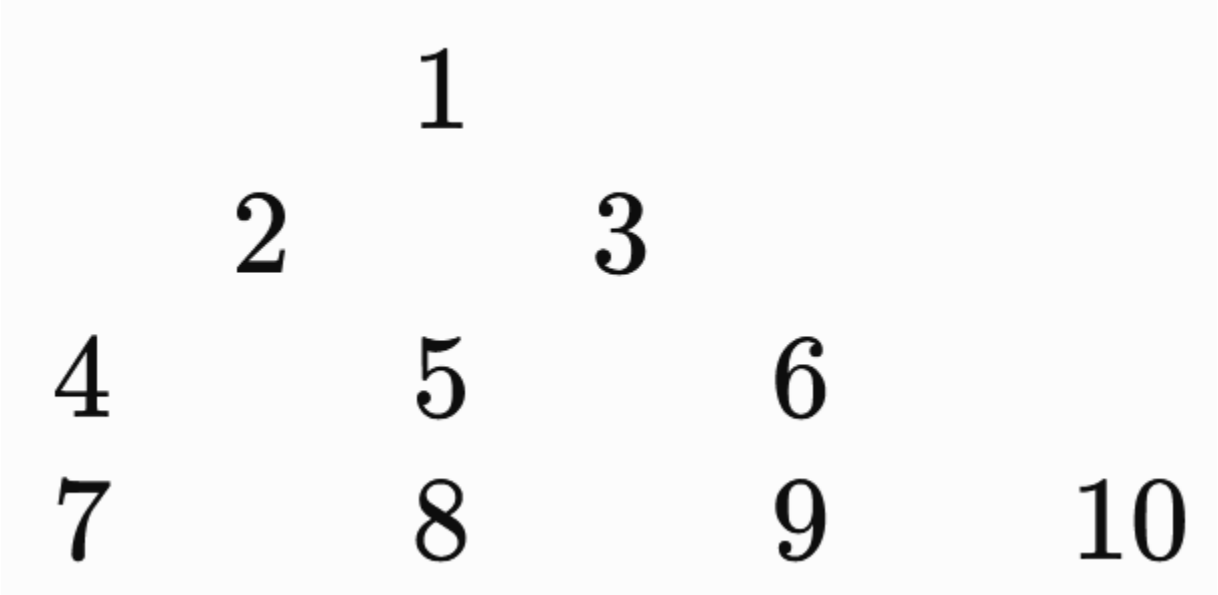

Team Exercise

- You are given N x N chessboard. Number its border cells clockwise, starting from the top-left corner. Given a border number K, determine its row and column.

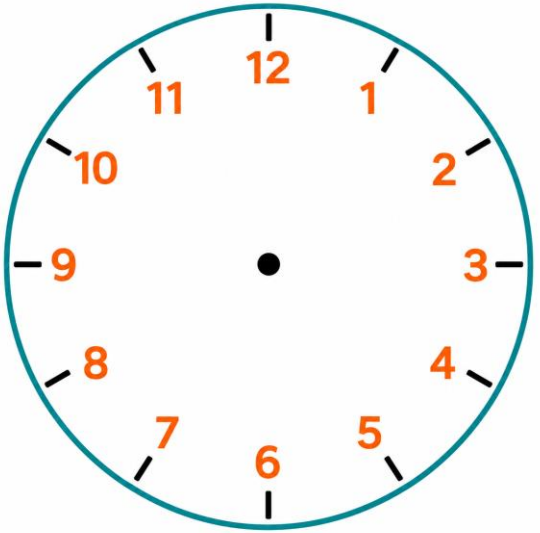

Team Exercise

- Given a number N, determine which row contains N, and its position within that row

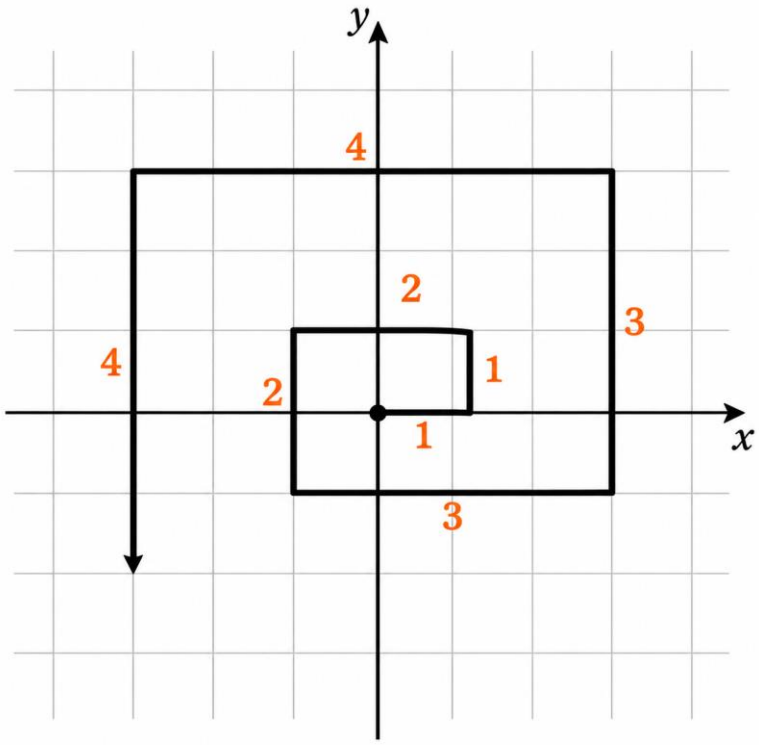

Team Exercise

- Given a time H:M on an analog clock, determine the smaller angle between the hour hand and the minute hand.

Team Exercise

- A robot starts at (0,0) and moves along the pattern shown in the image. Determine the robot's position after N-th movement.

Team Exercise

- An odd N x N grid is numbered in a spiral starting with 1 at the center. Given a row R and column C, determine the number stored in that cell.

21	22	23	24	25
20	7	8	9	10
19	6	1	2	11
18	5	4	3	12
17	16	15	14	13
